Figure 2: OLS Estimates of the Association Between Segregation and Longevity

Figure 3: IV Estimates of the Effect of Segregation on Longevity

Race ● Black ● White

This figure displays estimates from two-stage least squares regressions of the effect of racial segregation on longevity. Estimates refer to a 10 point increase in Dissimilarity.

Figure 4: IV Estimates of the Effect of Segregation on Longevity (By Gender)

This figure displays results of a model with an interaction between education-level and segregation for White Americans. The interaction is significant ($p < .001$) based on an F-test between nested and unnested models.

Figure 5: IV Estimates of the Effect of Segregation on Longevity By Education (White)

Figure 6: IV Estimates of the Effect of Segregation on Longevity By Education (Black)

Table 1: Representativeness of Numident Analytic Sample V Full Sample

Variable	Mean (All)	Mean (Sample)	diff	p.value
Age at Death	82.07	82.05	0.02	0.00
Male	0.44	0.44	0.00	0.54
Black	0.05	0.05	0.00	0.00
Education (Years)	10.31	10.39	-0.08	0.00
Married (In 1940)	0.49	0.48	0.00	0.00
Migrated (Birth County - Death County)	0.30	0.29	0.00	0.00
Reside in South at Death	0.31	0.29	0.02	0.00
County D at Death	0.53	0.54	-0.01	0.00
County Population	825474.85	908872.58	-83397.73	0.00
County Pr. Black	0.11	0.11	0.00	0.00
N	2473625.000	2152370.000	-	-

This table compares the descriptive statistics of the full Numident sample to the analytic sample subset of the sample used in analysis.

Table 2: Descriptive Statistics of Analytic Sample By Race

	Black	White
Age at Death	81.56	82.08
Male	0.42	0.44
Education (Years)	7.67	10.54
Married (In 1940)	0.54	0.48
Migrated (Birth County - Death County)	0.24	0.29
Reside in South at Death	0.57	0.27
County D at Death	0.60	0.54
County Population	1180871.19	894415.58
County Pr. Black	0.25	0.10
N	108627	2043743

This table presents descriptive statistics for the analytic sample by racial group.
